OUR COMPANY PROFILE

He Eleven.1 Consulting is an Information Technology firm with the vision to bring the use of technology to enhance productivity for Government, Corporate Organisations, Schools and End-Users.

Our purpose is to provide customized I T Services and Products that will enable your organisation optimize output and assist in the attainment of goals and objectives.

Below are the details of the different services/products tailored to address your Information Technology needs

HARDWARE AND SOFTWARE SUPPLY AND DEPLOYMENT

We are authorised reseller of various software and licenses for all our software partners like Microsoft, Kaspersky Lab, AVG, ESET etc. We also do sell computer hardware for the leading hardware manufactures that range from personal desktops to servers and network devices.

STRUCTURED DATA AND COMMUNICATION INSTALLATIONS

We are well positioned and experienced in the delivery of structure office cabling and data center solutions. We also have experienced professionals that can deploy convergence infrastructure solutions such Unified Wi-fi (indoor and Outdoor)

MAINTENANCE OF SYSTEMS

We provide both preventive and schedule maintenance services to ensure smooth running of your entire computer system. The maintenance service is carried out on a quarterly basis during non-peak usage hours to provide reliability for business operations.

INTERNET SECURITY SOLUTION LICENSE

In today's world, everyone acknowledges that information is a valuable asset and should be protected. At the same time, information must be accessible for a certain user group (for instance, employees, clients and partners of a business). This is why there is a need to create a comprehensive information security system. We provide Antivirus Solutions both for Enterprises and individual users to protect your information assets over the Internet, LAN (Local Area Network) e.t.c. from cyber criminals, hackers, spywares, spam.

SERVER VIRTUALIZATION

We implement the division of physical server into multiple logical servers. Virtualization has become the cornerstone of every enterprises's favourite money-saving initiative. Industry analysts report that between 60% and 80% of IT departments are pursuing server consolidation projects. Cost is usually the most important consideration for business upgrading its IT infrastructure, and implementing a Microsoft virtualization solution allows you to lower your TCO (Total Cost of Ownership) by

- ❖ Increasing hardware utilization to ensure more efficient use of resources through server consolidation
- ❖ Reducing power consumption and use of space in the datacenter
- ❖ Reducing your licensing costs and other up-front costs

- ❖ Simplifying application and desktop life-cycle management
- ❖ Lowering operational costs for maintenance and training

ACTIVE DIRECTORY DOMAIN SERVICES AND POLICY MANAGEMENT

Microsoft Active Directory Domain Services are the foundation for distributed network built on Windows Server Operating Systems that use domain controllers. Active Directory Services provide secure, structural, hierarchical data storage for objects in a network such as users, computers, printers and services. Active Directory provides support locating, managing and working with these objects. With this service deployed in your environment, task of network administration are simplified by maintaining a central repository of information, highly secured access to data through the use of security policies, sharing of resources such as printers and files is easier in Active Directory Environment.

FILE SERVER DEPLOYMENT

The File server service helps you store files, media, documents, folders centrally on a server. The main benefits of file server is that it provides space to store files. The server also makes the stored file available to all the computers attached to the network. This service provides network users ability to roam the desktop and my document location, so that users can logon on any computer in the network and the roamed location follows users irrespective of where they login. File server lessen the burden of backing up individual systems on the network and gives the administrator the ease to backup all network users data centrally from the file server.

IT PLATFORM CONSULTING SERVICES AND PROJECT MANAGEMENT

We provide such services as design, planning, implementation, migration and support of small, medium and enterprise environments. This includes Back Office and Enterprise Servers, Networking Solutions and all services related to Desktop deployment, support and management.

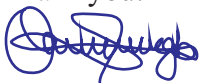

LICENSING AND LICENSE MANAGEMENT SERVICES

As a Microsoft Partner, we are experienced in helping our customers get value through license acquisition and compliance management.
